

Skills

- SQL (SQL Server, MySQL)
 - Microsoft Power BI
 - Python
 - Excel (VLookup, Pivot Tables, Power Query, Macros)
- Power Automate Process Mining
 - Celonis
 - Kibana
 - Tableau

Professional Summary

I am a Data Analyst with over 7 years of experience delivering client projects across insurance, banking, advertising, and process mining domains. I specialize in data analytics, data engineering, and visualization using SQL, Python, Power BI, Tableau, and Excel. I bring proven expertise in process mining tools (Celonis, Power Automate) and AI model operations (Kibana, Airflow). Throughout my career, I have built impactful dashboards, defined KPIs, and enabled data-driven decision-making for global clients.

Work Experience

OPERATIONS ASSOCIATE – All Risks Ltd, Insurance Project – Solartis Tech Services Pvt Ltd, Madurai May 2018 - March 2019

- Managed insurance endorsement processes, including modifying insurance contracts.
- This involved creating pre-renewal summaries, constructing proposals, preparing policies for delivery, issuing certificates of insurance, and processing final audits.

AUTOMATION TEST ENGINEER – Discover Bank, UAT Testing Project – Cognizant, Chennai September 2019 - March 2022

- Monitored and managed Autosys batch jobs across UAT and pre-production environments to ensure stable and timely batch execution. Performed pre-batch and post-batch validations, verifying job dependencies and execution status.
- Analyzed batch failures using Unix/Linux logs and SQL queries, identifying root causes and supporting timely resolution. Used Oracle SQL Developer to validate processed data and record counts during UAT cycles.
- Contributed to process improvements and automation ideas to enhance batch monitoring efficiency and reduce recurring failures.

DATA ANALYST – Microsoft Bing Ads, Live Marketplace Project – Cognizant, Bangalore April 2022 - September 2024

- Worked on Bing Search Ads platform using live production data, supporting international (INTL) markets and providing coverage for the US market.
- Monitored marketplace health metrics and analyzed ad performance trends to ensure stability and optimal delivery across regions.
- Designed dashboards and analytical reports using SQL and Power BI to provide actionable insights to stakeholders.

DATA ANALYST – Axa Insurance, Process Mining Project– Cognizant, Bangalore September 2024 - January 2025

- Analyzed and optimized end-to-end insurance business processes using Microsoft Power Automate Process Mining, leveraging event logs to identify inefficiencies and bottlenecks. Conducted process discovery to generate process models from event data, providing visibility into actual process flows.
- Performed conformance checking to compare real process execution against defined process standards, identifying deviations and root causes.

DATA ANALYST – Community Fibre Limited, Process Mining Project – Cognizant, Bangalore February 2025 - March 2025

- Improved customer acquisition for a fiber optic provider using synthetic datasets from LLMs.
- Built Power BI dashboards to identify bottlenecks and model workflows for optimization.

DATA ANALYST – PepsiCo Content Creation, Process Mining Project – Cognizant, Bangalore March 2025 - March 2025

- Created a synthetic event-log dataset using Large Language Models (LLMs) to model PepsiCo's content creation and approval process for process mining analysis in Celonis.
- Performed process discovery and KPI analysis in Celonis to understand process flows, variations, and efficiency across the content creation lifecycle.

DATA ANALYST – Microsoft Claims & Commercial, Process Mining Project– Cognizant, Bangalore April 2025 - November 2025

- Performed data engineering and analysis to prepare and validate event log data for process mining.
- Conducted process discovery and conformance checking, identifying deviations and root causes in claims and commercial processes.
- Defined and implemented KPIs to measure efficiency, compliance, and performance, enabling cross-process comparisons and insights.
- Developed interactive Power BI dashboards and custom visuals to present deviation-specific KPIs and trends, and improvement opportunities to stakeholders.

DATA ANALYST– US Bank, AI Model Operations Project – Cognizant, Bangalore December 2025 - Present

- Ensured reliability and performance of client AI models using Kibana, Airflow, Power BI and Jira.
- Analyzed AI models performance reports using Excel and prepared weekly and monthly trend analysis for stakeholder review.
- Reviewed statistical reports to assess system health and stability.

Personal Projects

OBJECT RECOGNITION USING CNN IN DEEP LEARNING – B.Tech (IT), Final Year Project November 2017 – March 2018

- Trained a Convolutional Neural Network using Python and the CIFAR-10 dataset, which consists of 60,000 32x32 color images across 10 classes (with 6,000 images per class).
- Visualized training data, monitored accuracy and loss, evaluated predictions on the test set, and also visualized a random subset of 36 testing images. The CNN model achieved high accuracy in classifying these images.

WALMART SALES DATA ANALYSIS IN MYSQL – Personal Project August 2022

- Analyzed Walmart sales data using MySQL, performing data cleaning, feature engineering, and exploratory data analysis to extract business insights on product performance, customer behavior, and sales trends.

RETAIL RISE DASHBOARD IN EXCEL – Personal Project March 2023

- Built an interactive Excel dashboard using advanced formulas, pivot tables, and data transformations to analyze retail sales and customer behavior. Visualized sales performance and inventory trends using dynamic charts.

AGAPE LIFECARE HOSPITAL DASHBOARD IN POWER BI – Personal Project June 2024

- Developed an interactive Power BI dashboard for Agape Life Care Hospitals by integrating patient, doctor, appointment, treatment, and billing data. Delivered a 360° view of hospital performance with actionable insights.

GRACE RPA AUTOMATION IN UIPATH – Personal Project July 2024

- Built an RPA automation using UiPath that captures user-entered data from a web form and automatically populates an Excel file without manual typing.
- This solution streamlines data entry, eliminates errors, and significantly reduces repetitive administrative workload.

REPAIRX PROCESS MINING IN CELONIS – Personal Project September 2024

- Built a Celonis Process Mining dashboard for RepairX service shop to analyze end-to-end repair operations using case, event log, customer master, and financial data.
- Implemented SLA monitoring with automated delay alerts, enabling faster issue detection and efficient process.

RESOURCE ONBOARDING AUTOMATION IN POWER AUTOMATE – Personal Project May 2025

- Automated the employee onboarding process using Power Automate by generating and sending onboarding emails automatically. It collects new employee details through a form and stores all details in an Excel without manual effort.

Education

BACHELOR OF TECHNOLOGY – K.L.N College of Information Technology – Sivagangai, TN
Information Technology – First Class

May 2018
